TECHNOLOGY SUPPORT APPRECIATED

DC CORRESPONDENT
KAKINADA, AUG 24

National Institute of Occupational Health director Dr Kamalesh Cincar said that a prognosis of the diseases can be detected early through the latest gene replacement and stem cell therapy and take precautionary steps to avoid diseases with the help of technology.

Participating as chief guest in two seminars on Environmental Occupational Health, Safety and Technologies here at Jawaharlal Nehru Technological University, Kakinada (JNTUK), organised by the School of Health Sciences and Research Department on Friday, Mr Cincar said that miracles can happen if medicine and technology are integrated in the efforts.

He called upon scientists, doctors and engineers to work in this direction and cooperate with disease-free society. He said that diagnosing a disease and finding a cure used to be a difficult task around 20 years back. Now, due to technology, however, it has become easy.

He said that the medical field has made easy strides due to bio medical engineering and bio technology.

Superintendent of police said everyone should make try to avoid accidents by using technology. Vehicle drivers should make use of helmet to protect their lives while everyone should make efforts to protect the environment. Otherwise, the human beings would face wars to get water in future. The University Rector K. Purnanandam, Indian Council of Medical Research Scientist Dr B. Ravichandran and others were present at the event.
